

Timothy

Impact your Rations

Impactor is a high yielding, medium maturing timothy. It is characterized by a semierect growth habit, consistent dark green leaf color and large seed head. Powerful rust resistance and winterhardiness contribute to Impactor's quality and persistence - where it has shown good neutral detergent fiber digestibility (%NDFD) and consistent second cut performance. Well Suited for pure stands and compaction hay market use.

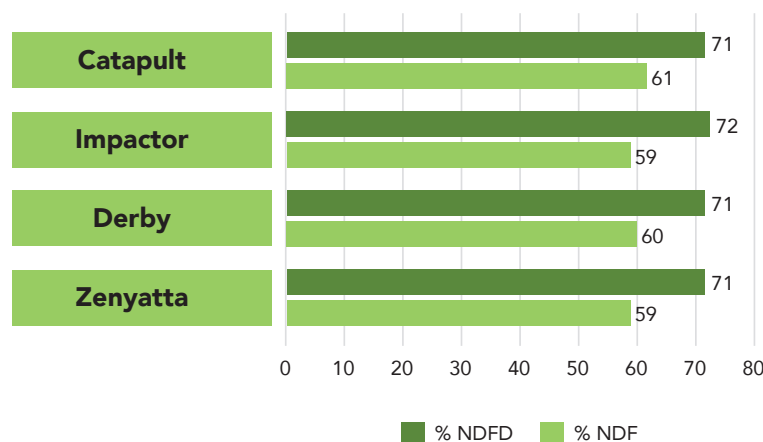

Key Features

- Dark Green Color
- Large Seed Head
- Compaction Market Specific
- Consistent Performance
- Exceptional Vigor
