

Maximize Season Long Production

Intermediate timothy for high quality hay and pasture applications. Summergraze was selected for intermediate maturity, yield over the growing season, winter survival and ground cover. Summergraze has been evaluated across North America and is ideal for summer production in pasture and hay stands. It combines good spring vigor, a very leafy plant in an intermediate maturity timothy that blends well with both grasses and legumes. Timothy is well known for high palatability, winterhardiness and tolerance to wet conditions.

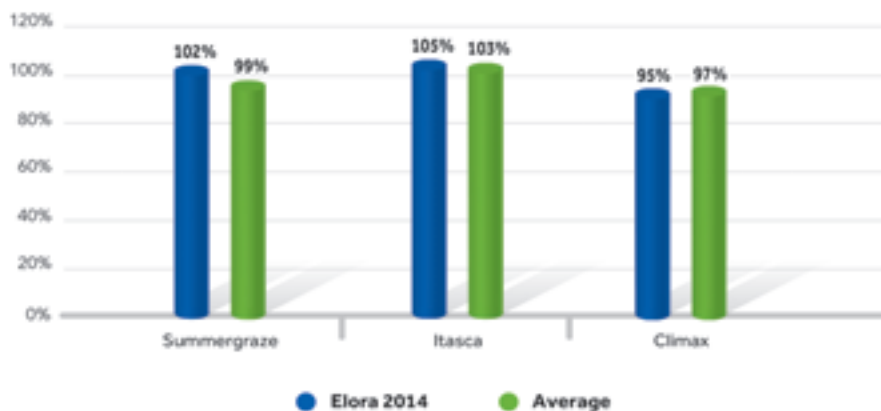

Excellent Density

Yield Performance

Ontario Performance Trials

Features

- Medium Maturity
- Tall Height
- Upright Growth Habits
- Great Lodging Resistance
- Great Regrowth
- High Yields
- Excellent Winter Hardiness
- Rapid Establishment
